

# ChuFei Wu

SOFTWARE ENGINEER · WEB SERVICE DEVELOPER

✉ df@dfder.tw | 📧 DF-wu | 🔗 [www.linkedin.com/in/chufei-wu-b33990164/](https://www.linkedin.com/in/chufei-wu-b33990164/)

## Skills

**DevOps** Docker, Jenkins, Git      **Cloud Platform** Digital Ocean, Oracle Cloud, AWS, Azure, Fly.io  
**Framework** SpringBoot, Django, Pact, RabbitMQ, Kafka      **Database** MongoDB, MariaDB, MySQL, Redis, PostgreSQL  
**Programming** Java, Python, C, JavaScript, Shell, Solidity      **SQA** Postman, SideeX, Insomnia, Junit,  
**Operation System** Various Linux-distro, Mac OS, Esxi, Unraid, TrueNAS  
**Misc** IOS/Android developing, IoT/Embedded developing, Network/Homelab/NAS Design,  
ITU Amateur Radio Operator Class 3

## Education

**Computer Science and Engineering, National Taiwan Ocean University**

Keelung, Taiwan

M.S./B.S degree

Sep, 2016 - Aug, 2022

- Programing coursework: Algorithm & Data Structures, ML/DL, NLP, IoT, Network, Information Retrieval, Software Engineering, IOS/Android programing, Software Project Management.
- Leading and managing several team projects to achieve the goal on time, achieving positive reviews in the most courses.

## Projects & Publications

### Composite Contract Testing Service

- CCTS is a testing service with the goal of minimizing the tester loading cost in Event-driven system testing.
- CCTS combine logs and State model to determine the target system behavior. In order to remain the flexibility of data structure, NoSQL is the better database type. We use MongoDB as the data persistence solution because the plenty resources and widely used.
- We validate this service to measure if it works. The result shows the CCTS does detects the potential executing failures and some common errors while testing.
- Publications:

29th Asia-Pacific Software Engineering Conference, APSEC 2022

Virtual, Japan Dec. 2022

Best Paper, 18th Taiwan Conference on Software Engineering, TCSE 2022

Taipei, Taiwan Jun. 2022

### Personal Data Authorization System & Personal Data Valuation and Payment System.

- The systems is constructed for solving the authorization and valuation issues from sharing of mechanical with Green Button (U.S. digital energy data sharing standard.)
- The system provides a thrid-party finance service for end-users to sell their data and withdraw from platform. This distributed system is designed with event-driven microservice to improve reliability and throughput.
- We deliver whole solution including source product, deploying, CI/CD chain, infrastructure and manual to our customer. The tech stack involving Springboot, Node.js, MongoDB, k8s, Jenkins, Citizen Digital Certificate (IC-card), etc.
- Publications:

2021 National Computer Symposium, NCS 2021

Taichung, Taiwan Dec. 2021

2020 International Computer Symposium, ICS 2020

Tainan, Taiwan Dec. 2020

### Pull Request, flipperdevices/flipperzero-firmware in Github

8.9K starts

- This is an popular open-source multi-tool embedded device with RFID, NFC, GPIO and sub-GHZ radio support to let user construct their own creative scenario.
- Correcting the command and instruction fail in building progress. Accepted changes by core team member.

### HideReplier

- An containerized, cloud-powered and automatic bot to dealt with anonymous content publish issue in Public discord server.
- It's my personal side project for classmates in university, managing over 3500 messages to date.

## Work Experience

**Intern of Software Engineer, Industrial Technology Research Institute, ITRI**

Hsinchu, Taiwan Jul. 2021 - Dec. 2021

- Researching, designing, and building a personal data authorization system with reliability and throughput. Including decentralized, micro-service, Event-driven Architecture, CI/CD chain, security, block-chain and third-party finance system.
- Collaborating and deliver two projects, several tasks in time with whole tool-chain and manual.
